

What is CELL-VET®?

CELL-VET® is specifically formulated for all horses, whether they are undergoing strenuous training in preparation for any type of eventing be it racing, dressage, endurance racing, show horses, etc. **CELL-VET®** is also excellent for retired horses as it supplies their bodies with all the necessary minerals, enzymes and amino acids that they require.

CELL-VET® is an enhanced liquid, highly-concentrated, super-energized, colloidal mineral and nutritional supplement, which you add to the drinking water of a horse on a daily basis, in order to maintain its peak performance and general well-being.

Benefits of CELL-VET® ?

As a dynamic multi-action agent, **CELL-VET®** is environmentally and ecologically safe and is especially formulated for horses. It has no detrimental side-effects, and has numerous benefits for horses:

- ◆ Promotes peak performance
- ◆ Replaces Electrolytes lost during training
- ◆ Enhances vitality and energy
- ◆ Reduces lethargy or distress
- ◆ Reduces unbalanced hyperactivity
- ◆ Has calming effect on horses
- ◆ Protects against diseases
- ◆ Enhances optimal bodily functions
- ◆ Strengthens systems, e.g. immune system
- ◆ Balances body mass
- ◆ Improves digestion
- ◆ Enhances texture and sheen of coat
- ◆ Maintains general well-being
- ◆ Works fast and effectively
- ◆ Is cost-effective and easy to use
- ◆ Achieves sustainable results

Today, increasing environmental pollution and fluctuations in the quality of food and drinking water are making horses more susceptible than ever to

distress and disease. Deficiencies of Oxygen and Minerals lead to accumulation of metabolic waste and toxins in bodily systems, creating a breeding ground for harmful bacteria, viruses and pathogens.

How DOES CELL-VET® achieve results?

CELL-VET® achieves results in a unique and amazing manner by supplying a horse with essential nutrients, elements and minerals, as well as nascent oxygen and hydrogen (due to the *splitting of water molecules*⊗ inside the horse), all in a controlled manner and at cellular level, where most needed.

When a horse drinks water with **CELL-VET®** in it, **CELL-VET®** starts working in its most amazing and unique manner, on the horse's physical, electromagnetic, chemical and biological levels.

Physical and Electromagnetic Levels:

CELL-VET® supplies a horse with essential elements and minerals required for proper composition of bodily fluids, maintenance of healthy nerve functioning, and formation of blood and bone cells.

CELL-VET® Minerals are in physical colloidal form. Colloidal particles are minute and negatively charged. Because most bodily fluids (like blood and lymph) are colloidal, the horse's bodily systems perceive **CELL-VET®** as normal healthy bodily fluid, and allow these micro-nutrients to pass immediately through the sensitive tissues of the horse's mouth, throat and oesophagus into the blood stream. They are then transported to all parts of the horse, at cellular level.

Our proprietary *Micro-Activated™ Delivery System*, and *Electroculture™ Technology*, which are used in formulating and ionically bonding **CELL-VET®**, ensure that over 95% of the nutrients are immediately absorbed into the horse's blood stream when nutrients are rapidly available for assimilation by all parts of the body.

Furthermore, the electromagnetic energy released by the production of nascent hydrogen boosts the horse's immune system significantly.

⊗ The *splitting of water molecules* is a proprietary technology that was patented by Everett L. Storey, the genius and inventor

of Cell-Vet™ and other amazing products. Everett Storey was a physical chemist and microbiologist, to whom Albert Einstein gave recognition for his unique and revolutionary work with oxygen and hydrogen molecules.

Chemical and Biological Levels:

CELL-VET® Oxygen (from *splitting of water molecules*⊗) is used in the production of metabolic energy, and for oxidizing toxins, acids and metabolic body waste for effective elimination.

CELL-VET® Hydrogen (from *splitting of water molecules*⊗) is used for irrigating, building and strengthening cells and organs, preventing inflammation, moistening lung surfaces for gas diffusion, and regulating body temperature.

CELL-VET® Amino Acids build proteins, hormones, neurotransmitters and anti-bodies, building the horse's immune system for resisting viral, bacterial and fungal infections.

CELL-VET® Enzymes enhance the digestive and metabolic functions of the horse, enabling it to assimilate more nutritional benefits, than previously, from the existing foods that it eats.

What else does CELL-VET® do?

Despite the fact that the horse's systems were already cleansed and detoxified when **CELL-VET®** was initially used, additional *cleansing* might happen periodically as the horse's bodily functions strengthen during training, and should not be mistaken as the onset of sickness. During periods of cleansing, ensure that the horse has enough drinking water, is kept warm, and is allowed to rest.

CELL-VET® is a Proprietary Formulation containing Elements, Minerals and Trace Minerals, Enzymes and Amino Acids. including Calcium, Copper, Iron, Magnesium, Manganese, Phosphorus, Potassium, Sulfur, Zinc, Silicon, Liquid Seaweed (Lithothamnium Calcareum and Purified Water.

Administration Process

Directions: Establish the average amount of water the horse drinks per day (Daily Water Intake). If other horses drink from same source, establish average amount drunk by all of them. Then, use table below to calculate the appropriate amount of CELL-VET®, and mix this into the water to super-energize it. NOTE: If the horse has already been on CELL-VET® for some time, the recommended dosage of 4ml's per day can be given from the outset, and there is no need to follow the following introductory dosage programme.

Daily Water Intake	Amount of CELL-VET®			
	Days 1 & 2	Days 3 & 4	Days 5 & 6	Ongoing Daily
20 litres	1 ml	2 ml	3 ml	4 ml

Other Water: Remove all other drinking water.

Water Quality: If drinking water contains impurities or chlorine, double the amount of CELL-VET® to purify the water. Ideally, add appropriate amount of CELL-VET® to water, mix it and let it stand overnight (or a few hours). Then, again add the same amount of CELL-VET® to the water, and give the horse this super-energized water.

Oral Application: Dilute appropriate amount of CELL-VET® with clean water in a ratio of 1:10. e.g. 4ml CELL-VET® added to 40ml of water. Syringe directly into the mouth of the horse.

Is CELL-VET® a medicine?

CELL-VET® is not a medicine. As a nutritional supplement, it provides a horse with a constant stream of essential building blocks (e.g. oxygen, minerals, etc.) so that its systems can optimally carry out their functions of energising, cleansing, building, balancing and protecting living tissue every day.

Disease Conditions: If horse suddenly shows signs of getting sick, double existing amount of CELL-VET®

being added to water at the time, or apply orally, to boost the horse's ability to resist disease.

A horse cannot overdose on CELL-VET® as its bodily systems will eliminate unused excess.

Oxygen For Life SA (Pty) Ltd and Nu Science Corporation USA specifically make no medical claims or otherwise for the treatment, prevention, cure or mitigation of disease. If the horse has a medical condition, we recommend you consult a Veterinarian.

CELL-VET® Ingredients

CELL-VET® is a registered blend of natural plant-sourced minerals, nutrients and electrolytes in ionic colloidal suspension, and proprietary elements that supply controlled nascent oxygen and hydrogen at cellular level. CELL-VET® can be taken in conjunction with other remedies and medications as it increases their bio-availability and effectiveness.

CELL-VET® contains no banned Substances

The National Racehorse Authority (previously known as The Jockey Club) conducted comprehensive screening tests on CELL-VET® for basic, neutral and acidic drugs and all steroids. They have certified that CELL-VET® contains no traces of any prohibited substance, in terms of their rules.

What else is CELL-VET® used for?

CELL-VET® can be mixed with salve or diluted with water (1 ml CELL-VET® per 20 ml distilled or filtered water) can be applied topically to wounds and sores on the horse's skin. Apply as often as required.

Precautions

For animal use only. Keep bottle away from children. Avoid contact with natural organic and petroleum based materials (e.g. silk, cotton, linen, wool). Contains enzymes that may break down these organic materials. Keep away from cellphone, computer, refrigerator, microwave oven, and any electrical appliance emitting electromagnetic current that may reduce its potency.

Registration Number V15885
Act. 36 of 1947
South African Dept. of Agriculture

21st Century
Super-energised
Oxygen mineral supplement

for

Large Farm Animals

CELL-VET® is manufactured by Nu Science Corp. U.S.A. and is based on the same technologies as Cellfood®, the nutritional supplement (for humans).
